

MOUNT OLIVE SOLAR FARM

Project Highlights

- **Project Name:** Mount Olive Solar Farm
- **Project Type:** Utility-Scale Solar | Landfill | Superfund
- **Project Location:** Mount Olive Township, Morris County, New Jersey, USA
- **Project Size:** 25.6 MWDC | 19.8 MWAC
- **Project Operation Date:** November 2022
- **PV Module Supplier:** Boviet Solar
- **Project Developer:** CEP Renewables
- **Project Owner / Operator:** NJR Clean Energy Ventures III Corporation

Project Overview

The Mount Olive Solar Farm is a 25.6 MWDC / 19.8MWAC utility-scale solar project developed on the remediated Combe Fill North Landfill superfund site in Mount Olive Township, New Jersey. Developed by CEP Renewables with CS Energy as the EPC, powered by Boviet Solar's top-performing PV modules, and owned by NJR Clean Energy Ventures III Corporation, the project was completed in November 2022 and is recognized as the largest landfill solar project in North America.

Economically, the Mount Olive Solar Farm represents a multi-million-dollar investment, created over 200 construction jobs, sustained ongoing O&M employment, and enabled the township to recover \$2.3 million in back taxes from the property. It generates enough clean electricity to power over 4,000 homes annually, delivering long-term revenue streams to the community. Socially, the project demonstrates the successful reuse of a contaminated Superfund site, enhances community pride, and positions Mount Olive Township as a leader in sustainable redevelopment. Environmentally, Mount Olive produces about ~42,000 MWh of clean energy annually, offsetting ~21,000 metric tons of CO₂ emissions, equal to removing ~4,500 cars from the road, eliminating ~37 million pounds of coal, conserving ~380 million gallons of water, and planting the equivalent of ~350,000 trees each year.

Behind the project's long-term performance is a trusted partnership. Chris Ichter, Executive Vice President of CEP Renewables, states:

"Our relationship with Boviet Solar spans over ten years, built on mutual trust, reliability, and shared commitment to excellence. Boviet Solar's PV modules consistently deliver the efficiency and durability we need to ensure our projects perform for decades. They've proven time and again to be a true longterm partner, responsive, dependable, and aligned with our mission to advance clean, sustainable energy."

Economic Benefits

Mount Olive Solar Farm generates approximately 42,000 MWh of renewable electricity annually, enough to power more than 4,000 New Jersey homes. The project created over 200 construction jobs, sustained local contractors, and continued to provide long-term operations and maintenance employment. In addition, the project resolved \$2.3 million in back taxes owed to Mount Olive Township, strengthening municipal finances and freeing funds for schools, infrastructure, and public services. By delivering renewable energy into the PJM market through JCP&L, Mount Olive contributes to grid stability while supporting New Jersey's clean energy portfolio.

Social Benefits

The Mount Olive Solar Farm highlights the power of landfill redevelopment, converting the long-blighted Combe Fill North Superfund site into a clean energy asset. The project eliminated environmental liabilities for the township while creating workforce training and local contracting opportunities. It also strengthened community identity and pride by positioning Mount Olive as a national model for landfill-to-solar redevelopment.

Environmental Benefits

Each year, the Mount Olive Solar Farm produces about 42,000 MWh of zero-emission electricity, offsetting approximately 21,000 metric tons of CO₂ emissions. This is equivalent to removing nearly 4,500 gasolinepowered cars from the road annually or planting around 350,000 trees. By replacing fossil fuel generation, the project avoids the combustion of nearly 37 million pounds of coal each year and conserves close to 380 million gallons of water, improving air quality, reducing greenhouse gas emissions, and protecting natural resources. The redevelopment of the landfill further enhances sustainability by giving new life to an otherwise unusable property.

BOVIET SOLAR

Boviet Solar, an Inox Solar Americas company, is a solar energy technology and manufacturing company focused on delivering high-performance photovoltaic (PV) modules for the U.S. market. Its portfolio includes Gamma Series™ monofacial and Vega Series™ bifacial PV modules, designed for utility-scale, community solar, commercial, and industrial (C&I), and residential applications, with a focus on reliability, efficiency, and long-term performance.

The company operates a state-of-the-art manufacturing facility in Greenville, North Carolina, with approximately 3.0 GW of annual production capacity. This U.S.-based production supports localized supply, efficient logistics, and alignment with project timelines and market requirements.

As part of Inox Solar Americas, Boviet Solar benefits from enhanced financial backing and integration within a broader renewable energy platform under Inox Clean Energy and the INOXGFL Group. This strengthens its ability to support compliant, financeable, and scalable solar projects while maintaining consistent execution and product performance.

Boviet Solar works closely with developers, EPCs, and asset owners to deliver projects on time and support long-term performance. The company remains committed to advancing clean energy by providing dependable solutions that enable customers to build and operate projects with confidence.
